Who’s running the course?

Trevor graduated in dentistry from Bristol University in 1995. In 1999 he joined the three year postgraduate orthodontic training programme at the Birmingham Dental Hospital and in 2002 was awarded a Masters degree in Orthodontics and the Membership in Orthodontics winning first prize for his treated cases judged on difficulty, clinical management, and documentation. In 2005 Trevor completed consultant training at the Eastman Dental Hospital in London and was awarded the Fellowship in Orthodontics of the Royal College of Surgeons winning the Maurice Berman Prize for cases treated during this time.

In the same year he was appointed a Consultant Orthodontist at the Leeds Dental Institute and has a current clinical remit centering on joint management of patients undergoing orthognathic treatment. In 2007 he set up the first UK course to train Orthodontic Therapists with Simon Littlewood and in 2015 was appointed Honorary Clinical Associate Professor in Orthodontics at the University of Leeds with research areas including clinical and applied research, dental public health and health services research and research in dental education.

Since 2007 Trevor has worked in specialist practice both in Leeds and in Beverley.

Trevor also lectured on the subject of 2D Lingual during the British Orthodontic Conference in 2017.

Course Timetable

- 9:30 - Introduction and 2D lingual appliance overview
- 11:00 - Hands on bracket placement
- 11:45 - 2D Lingual, a useful discreet alternative
- 12:30 - Lunch
- 2:00 - Hands on wire placement
- 2:45 - 2D lingual, an appliance of choice
- 3:30 - Tea break
- 4:00 - Getting started
- 4:20 - Q & A

What experts say:

“It was the 2D bracket that first got me into Lingual Orthodontics and over a decade later it still remains one of the most important items within the practice such as its versatility.

The 2D can be used for simple correction of relapse cases through to, out of the box’ treatments to help meet the aesthetic demands of the ever increasing number of adults who require Ortho-Restorative treatment and refuse to wear labial appliances.

The bracket is small, comfortable and due to its passive ligation, allows for rapid tooth movement.

It is ideal for those wishing to enter the Lingual orthodontic arena as well as those who are experienced in Lingual orthodontics and wish to try something new without incurring large laboratory bills associated with, system’ driven appliances that appear to be taking over.”

(Ian Hutchinson)

“The 2D system is a cost effective aesthetic appliance. Patients like the discreet nature of the lingual bracket and having such a low profile the 2D bracket is well tolerated. As well as being the treatment of choice for many of my patients I have increasingly found the 2D system a useful tool in my armamentarium when dealing with other stubborn clinical situations e.g rotated teeth, especially lower incisors, that aligners or labial ceramic brackets have not successfully corrected.”

(Trevor Hodge)
